SAMPLE PAPER

TIME: 2 Hours

MM-40

GENERAL INSTRUCTIONS:

- 1. All questions are compulsory.**
- 2. Read each question carefully before attempting.**

SECTION-A

1. Read the passage carefully and answers the questions that follow: (1X5=5)

Comprehension Passage:

Trees are an essential part of our environment. They provide us with oxygen, which is crucial for our survival, and absorb carbon dioxide, helping to combat climate change. Trees also provide shade, prevent soil erosion, and support countless forms of wildlife. In many cultures, trees are considered sacred and symbolize growth and strength.

Deforestation, or the large-scale removal of trees, is a major problem today. It leads to habitat destruction, loss of biodiversity, and an increase in global temperatures. Planting more trees and protecting forests is an important step towards ensuring a healthier planet for future generations.

1. What do trees absorb to help combat climate change?
 - a) Oxygen
 - b) Carbon dioxide
 - c) Nitrogen

CASE-STUDY BASED QUESTIONS

Q.6 Read the source given below and answer the questions that follow: (4x1=4)

Natural calamities such as earthquakes, tsunamis, cyclones, floods, and droughts significantly impact our environment and communities. An earthquake is a sudden shaking of the Earth's surface due to the movement of its plates. Tsunamis, often triggered by undersea earthquakes, are massive ocean waves that can inundate coastal areas. Cyclones, known for their powerful winds and heavy rains, can lead to extensive flooding. Floods occur when rivers or lakes overflow, submerging the surrounding areas. Droughts, on the other hand, are prolonged periods without sufficient rainfall, causing severe water shortages. Effective disaster management strategies include creating emergency plans, educating people about safety measures, and constructing infrastructure that can withstand such events. Early warning systems and community preparedness play crucial roles in reducing the adverse effects of these natural calamities.

(a) What usually triggers a tsunami?

(i) Heavy rainfall

(ii) Undersea earthquakes

(iii) Strong winds

(iv) Droughts

(b) What kind of disaster is a cyclone?

(i) Earthquake

(ii) Tsunami

(iii) Storm with strong winds and heavy rains

(iv) Drought

(c) How do floods typically occur?

(i) Due to volcanic eruptions

(ii) From the overflow of water bodies

(iii) As a result of earthquakes

(iv) Because of prolonged dry periods

(d) What is an essential part of disaster management?

(i) Ignoring natural calamities

(ii) Creating emergency plans and educating people

(iii) Building only non-durable structures

(iv) Preventing rainfall
