Safety matters a lot . Animals choose to live in groups for several important reasons. First and foremost, living together provides safety in numbers. When animals are in a group, they can watch out for predators more effectively, as there are more eyes and ears to detect danger. Additionally, group living offers better opportunities for finding food. Many animals, like wolves and lions, hunt in packs or prides, allowing them to take down larger prey that they couldn't manage alone. Living in groups is also important for animals because it helps them talk and connect with each other. This talking and being together is important for keeping their group strong, deciding who's in charge, and even finding partners to have babies with. For animals like elephants, living in groups means they can learn from older ones and pass on what they know to younger ones. So, living in groups helps animals stay safe and do well where they live.
